Fund Profile

Experienced Investment Team:

Managed by an investment team with more than 70 years of collective experience managing private accounts in the same investment style.

Well-Proven Risk Limiting Discipline:

Trailing stops are manually implemented under every individual holding, and are manually reviewed daily, in order to moderate any sustained losses to the portfolio.

Access to Institutional Money

Managers: By utilizing multiple leading institutional money managers, Sierra provides another level of broad diversification and expertise in their investment styles.

Subtotal	93.2%

Fund Risk Disclosures

The Sierra Tactical Risk Spectrum 50 Fund invests in foreign securities that could subject the Fund to greater risks including currency fluctuation, economic conditions, and different governmental and accounting standards. In general, the price of a fixed income security falls when interest rates rise. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Each Underlying Fund is subject to specific risks, depending on its investments. Underlying Funds are also subject to investment advisory fees and other expenses, which are indirectly borne by the Fund. As a result, your overall cost of investing in the underlying stocks, bonds and other basic assets will be higher than the cost of investing directly in them.

Past performance does not guarantee future results and there is no assurance that the Fund will achieve its investment objectives. Current and future portfolio holdings are subject to risk.

TERMS & DEFINITIONS

Max Drawdown is an indicator of the risk of a portfolio chosen based on a certain strategy. It measures the largest single drop from peak to bottom in the value of a portfolio (before a new peak is achieved) using month-end data

Standard Deviation is a statistical concept used in investment management to measure risk for the variability of return of a fund's performance. A high standard deviation represents greater risk.

Sharpe Ratio uses standard deviation to measure a fund's risk-adjusted returns. The higher a fund's Sharpe Ratio, the better a fund's returns have been relative to the risk it has taken on.

Downside Deviation is a risk statistic measuring volatility. It is a variation of Standard Deviation that focuses only upon the "bad" volatility.

Sortino Ratio is a modification of the Sharpe Ratio that differentiates harmful volatility from general volatility by taking into account the Standard Deviation of negative asset returns, called Downside Deviation.

Trailing Stops are a special type of trade order where the stop-loss price is not set at a single, absolute dollar amount, but instead is set at a certain percentage or a certain dollar amount below the market price.

ANNUAL OPERATING EXPENSES

	Inst Class
Management Fees & Other Expenses	1.39%
12b-1 Fees	—
Total Gross Annual Fund Operating Expenses	2.08%
Total Net Annual Fund Operating Expenses	2.00%

The expense ratios shown are as of May 15, 2021. Expenses include the underlying fund expenses. Please see the Fund's prospectus for more details.

The Total Annual Fund Operating Expenses includes the fees and expenses of the underlying funds, which are estimated at 0.69% per year. The Fund's investment advisor has voluntarily contracted to reduce its fees and/or absorb expenses until at least January 31, 2023 to limit expenses borne by the shareholder.
