TERMS & DEFINITIONS

Max Drawdown is an indicator of the risk of a portfolio chosen based on a certain strategy. It measures the largest single drop from peak to bottom in the value of a portfolio (before a new peak is achieved) using month-end data.

Beta is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole.

Standard Deviation is a statistical concept used in investment management to measure risk for the variability of return of a fund's performance. A high standard deviation represents greater risk.

Sharpe Ratio uses standard deviation to measure a fund's risk-adjusted returns. The higher a fund's Sharpe Ratio, the better a fund's returns have been relative to the risk it has taken on.

Downside Deviation is a risk statistic measuring volatility. It is a variation of Standard Deviation that focuses only upon the "bad" volatility.

Sortino Ratio is a modification of the Sharpe Ratio that differentiates harmful volatility from general volatility by taking into account the Standard Deviation of negative asset returns, called Downside Deviation.

Trailing Stops are a special type of trade order where the stop-loss price is not set at a single, absolute dollar amount, but instead is set at a certain percentage or a certain dollar amount below the market price.

Cumulative performance from inception is the total increase in value of an investment in Class A and C shares respectively, assuming reinvestment of dividends and capital gains.

Investors cannot directly invest in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

The performance quoted herein represents past performance for Class A (SIRAX) and Class C (SIRCX). For performance numbers to the most current month end, please call toll-free 1-866-738-4363 or visit our website, sierramutualfunds.com. Current performance may be lower or higher than the performance data quoted above. Past performance is no guarantee of future results. The investment return and principal value of an investment in the Fund will fluctuate, so that investors' share, when redeemed, may be worth more or less than their original cost. The maximum sales charge (load) for Class A shares is 5.75%.

Underlying fund investments including mutual funds, closed-end-funds and ETFs. In some instances it may be less expensive for an investor to invest in the Underlying Funds directly. There is also a risk that investment advisers of those underlying funds may make investment decisions that are detrimental to the performance of the Fund. Investments in underlying funds that own small and mid-capitalization companies may be more vulnerable than larger, more established organizations to adverse business or economic developments. Investments in underlying funds that invest in foreign equity and debt securities could subject the Fund to greater risks including currency fluctuation, economic conditions, and different governmental and accounting standards.

Investors should carefully consider the investment objectives, risks, charges, and expenses of the Fund. This and other information about the Fund is contained in the prospectus and should be read carefully before investing.
